

Yehia Alsaeed

AI / Machine Learning Engineer

Cairo, Egypt | yehias3eed11@gmail.com

linkedin.com/in/yehia-alsaeed | github.com/Yehia-Alsaeed

Summary

Computer Science (Artificial Intelligence) graduate and AI/ML engineer who builds practical AI systems end-to-end, from large language models and multi-agent systems to computer vision and deployed full-stack products. Strong across the full workflow: data preparation, modeling, evaluation with real metrics, and shipping.

Education

BSc (Hons) Informatics and Computer Science, Artificial Intelligence Major

The British University in Egypt (BUE), Cairo | Graduated 2026

Relevant coursework: Artificial Intelligence, Machine Learning, Data Science, Data Structures and Algorithms, Database Management, Software Engineering.

Experience

Intern, Dell Technologies Summer Academy 2025 | Aug - Sep | 190 hours

- Completed a 190-hour program covering ISM, AI, automation, data science, software engineering, project management, and leadership.
- Co-built and pitched a four-module AI career platform to senior leaders in an Agile team, prototyping a job-forecasting dashboard, short-form video hub, career assessment with roadmaps, and an AI interview assistant.
- Job-shadowed Presales, Solution Architecture, and Project Management to understand the full delivery lifecycle.

Freelance Shopify Web Developer | Cairo, Egypt | 2025 - Present

- Designed, built, and launched multiple Shopify stores for independent clients, optimizing each for conversion and SEO with custom Liquid, HTML, CSS, and JavaScript.

Projects (the rest are on GitHub)

SkillBridge AI Interviewer (Graduation Project) | React, FastAPI, PyTorch, OpenAI, MediaPipe

- Developed an AI mock-interview coach that scores webcam interviews on five traits using speech transcription, eye-contact estimation, and LLM scoring.
- Reads an uploaded CV to tailor its questions to the role, then generates a scored PDF report at the end of the interview.

Llama QLoRA Education QA | PyTorch, Hugging Face (Transformers, TRL, PEFT)

- Fine-tuned an open-source AI model (Meta Llama) using QLoRA, taking it from 0% correct answers to 66% correct.
- Built the full pipeline: data prep, instruction formatting, fine-tuning, and Exact Match / ROUGE evaluation.

AI Study Planner Agents | CrewAI, GPT-4o-mini, sentence-transformers

- Designed a multi-agent LLM system (profiler, generator, critic, optimizer) that generates and refines study schedules with tool-augmented reasoning.
- Added semantic difficulty classification and a TensorBoard evaluation across model temperatures.

Oxford Pet Binary Segmentation | PyTorch, timm

- Trained AI models (FCN-ResNet18, SegNet-VGG16, HRNet-W18) to automatically trace the outline of a pet in a photo, separating it from the background.
- HRNet-W18 came out on top: 93% accurate and fast enough to run in real time (0.06 seconds per image).

Prestige Motors Showroom | React, TypeScript, Node.js, Express, MongoDB, Vercel

- Built and deployed a full-stack car-showroom web app with car reservations, a used-car offer/negotiation flow, and a separate admin dashboard.
- Implemented JWT auth with role guards, API rate limiting, and a Cloudinary image pipeline.

Skills

- **Languages:** Python, C++, Java, TypeScript/JavaScript, SQL
- **AI & ML:** PyTorch, Machine Learning, deep learning, computer vision, NLP, LLM fine-tuning (QLoRA, PEFT), multi-agent systems (CrewAI), Hugging Face, scikit-learn, Pandas, NumPy

- **Web & Tools:** React, Node.js, FastAPI, Express, MongoDB, REST APIs, Git
